Ams-t/s tree strap is the mounting solution for installing mariner, cabrillo or calypso sl series spotlights into tree canopies. The solid brass mount transitions to a pvc foot, creating a contact buffer so as not to hurt the tree. A UV-stabilized elasticized strap securely holds the fixture in place, while also allowing for uninhibited tree growth. Strap can be cut to length, accommodating from 2 -18 inch caliper branches. For larger branches or trunks, t/s brass fittings can be connected in series, combining up to 3 units on a single strap, with 5 - 36 inches in between. Comes in 22 or 36 inch length. Strap available in clear silicone. 36 inch length.

SHADE COLOR	Clear
