

**DESIGNER**

Patrick Jouin

**BRAND**

Leucos

**DESCRIPTION**

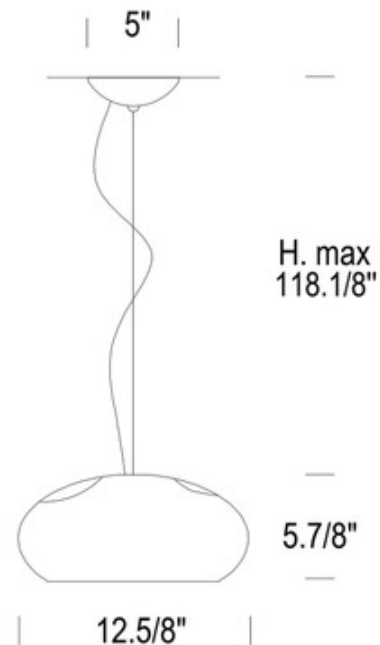

With Mercure, Patrick Jouin took a traditional Murano glass blowing technique and used it to create a decidedly contemporary light that dazzles. Mercure is made by adding a mist of water between layers of the hand blown glass that evaporate and creates bubble patterns that are unique to each lamp. The glass is also dimpled to create a further ripple effect across the surface. Part of the glass is then chromed to create a mirror finish that diffuses the light while the other part of the glass is left transparent to provide sufficient light output. The result is a dynamic and engaging light that will have you admiring its unique craftsmanship and design ingenuity as you enjoy it in your living room, kitchen, dining area, bedroom, office, hall or contract application.
