Description:

Qlocktwo Creator's Edition wall clock, English Version, is available in Rust, Platinum, Raw Iron, Vintage Copper, and Gold for a limited time. The typographic front combines the moment with the written word and makes it a statement. Square shaped clocks mounts to a wall. A matrix with symmetrically arranged characters lights up to form words. The front panel of Qlocktwo is supported by eight magnets. Clock comes with wall assembly and solid acrylic glass stand for the standing version. Each front panel in Rust finish is unique and manually corroded in an elaborate process. All generated rust surfaces are completely different from each other. In a further working step, the rust surface is made resistant to abrasion, laser signed and numbered. This creates an individual look that is popular in architecture as corten steel. The core front panel of Qlocktwo Gold consists of a laser cut steel plate. The surface and every single section of the letters are refined by hand with gold leaf in an elaborate process. This way, the front panel gets the typical gold leaf structure with the glamour of royal significance. Qlocktwo Gold should only be used as a wall clock. Each clock is a desirable and unique example of modern, exact laser-cut steel and centuries old tradition of goldsmith's crafts. 110V low energy consumption power supply with LED technology. 17.72
