Unison Linear Suspension (LED)

CEILING

GENERAL PRODUCT INFORMATION:

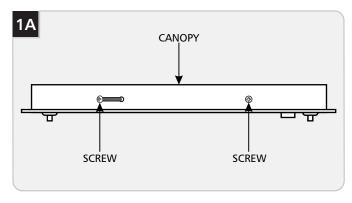

This product is suitable for damp locations.

This product can mount to either a 4" square electrical box with round plaster ring or an octagon electrical box.

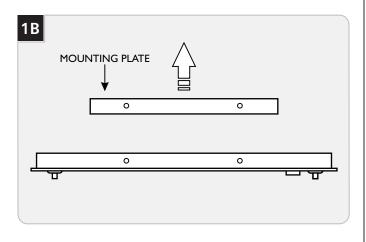

This product may be dimmed with a low voltage electronic dimmer.

> CAUTION-RISK OF FIRE This product requires installation by a qualified electrician. Before installing be sure to read all instructions and TURN OFF POWER TO THE ELECTRICAL BOX.

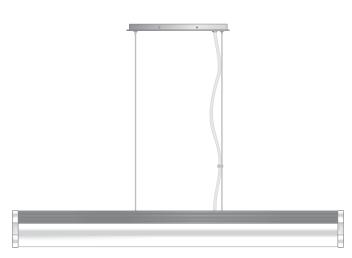

Install the Mounting Plate

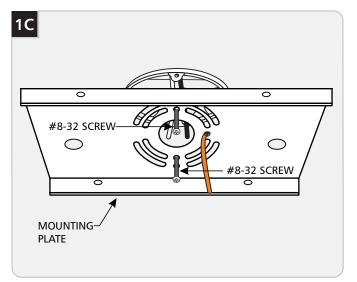

1 Separate the mounting plate from the canopy by removing all four screws.

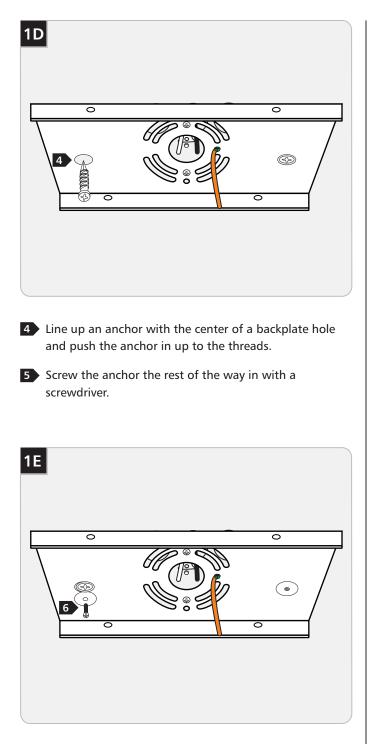

3 Secure the mounting plate to the electrical box with the two #8-32 screws provided.

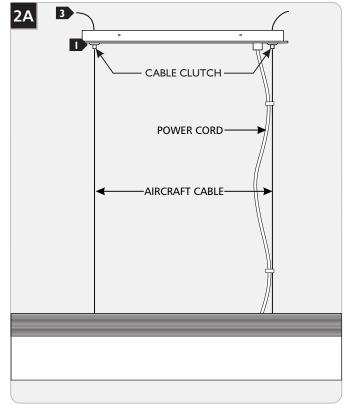

6 Secure the backplate to the anchor with a screw and washer.

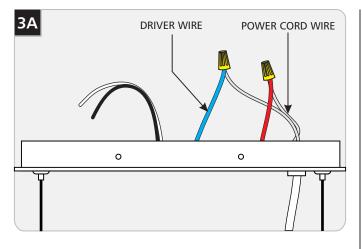

7 Repeat steps 4-6 for the remaining anchor hole.

Assemble the Fixture

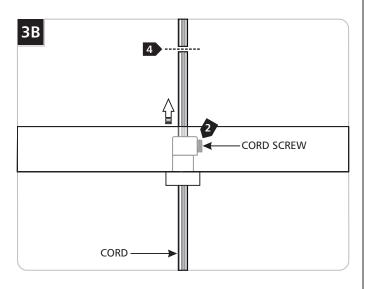

- 1 Feed the aircraft cables through the cable clutches in the canopy.
- 2 Evenly pull the aircraft cable up through the canopy to raise the fixture to the desired length.
- Cut off the excess aircraft cable leaving enough for fine leveling later.

Adjust the Power Cord

Take note of the wire connections and remove the wire nuts to disconnect the power cord wires from the driver wires.

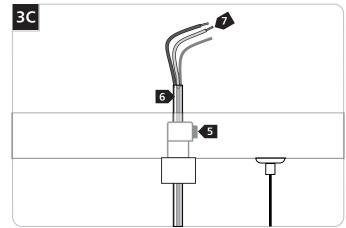

2 Loosen the cord screw.

Pull the power cord through the canopy until it reaches the length desired.

NOTE: The power cord does not support the fixture, and does not have to be tight. For a casual "lazy cord" look, cut the power cord several inches longer than the drop height of the fixture.

Leave 6 inches of cord behind the canopy and cut off extra cord.

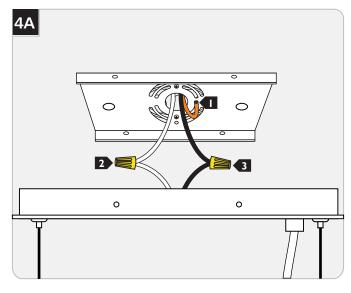

5 Tighten the cord screw.

6 From the end of the cord, strip the insulation 4" using a sharp knife. <u>Make sure not to nick the inner wires</u>.

Cut off the extra cord, strip 1/2" off the wire ends, and reconnect the power cord wires to their original connections (reversal of 3A).

Install the Fixture to the Canopy

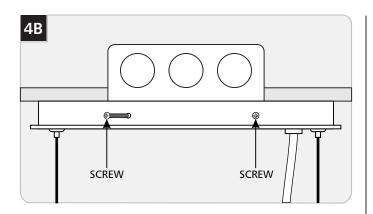

NOTE: It is recommended that one person hold the fixture while the electrician connects the power and installs the canopy.

 Connect the fixture to a suitable ground in accordance with local electrical codes.

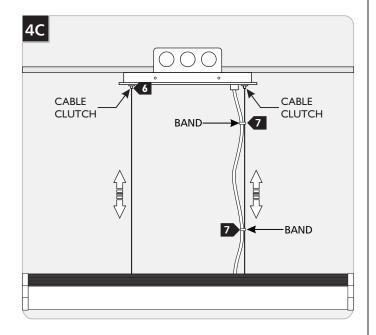

2 Connect the white driver wire to the neutral power line wire with a wire nut.

Connect the black driver wire to the hot power line wire with a wire nut.

4 Place all wires and wire nut connections inside the canopy.

5 Align the canopy holes with the mounting plate holes. Secure the canopy in place by tightening the four screws.

6 If necessary, adjust the aircraft cables until the fixture is level; feed the cable into the cable clutch to raise the fixture and push in on the cable clutch nipple to release the cable and lower the fixture.

7 Adjust the bands holding the power cord and aircraft cable to the desired position.
