

CRISS-CROSS Chandelier | Blocking Diagrams

NOTE:
 The installation of this fixture depends on the materials into which the bracket will be anchored to and are not supplied by us. The testing of the ceiling strength is the responsibility of the installer. The ceiling should be able to hold the entire weight of the fixture or more for added strength/ safety. Carefully evaluate the ceiling and fixture weight prior to mounting in order to make sure the ceiling is not overloaded. The fixture must be installed into a solid structure (i.e cross-members, beams, joists, etc) in the ceiling.
