

**Welcome to the SQUARELY family.  
By choosing the SQUARELY planter,  
you are helping to spread the idea of con-  
scious consumption and sustainable design.  
Our products are made from excess wood;  
our containers bring to life recycled plastic.**

**Self-irrigation system**

SQUARELY introduces our smart self-watering system, designed to help you reduce your watering efforts and keep the plants at the right moisture levels. To use the self-watering system, remove the side of the planter/ door with the SQUARELY logo by lifting it up, revealing the water tank inside. If empty, refill with 12l of water. On the hot summer days, make sure it does not dry out entirely. Always water additionally directly onto the soil to keep the capillary straps humid. Capillary straps will take the water up to prevent your plants from drying out by keeping the right level of moisture in the soil.

**Bag & Mat instructions**

Place the bag directly into the top of the container so it aligns with the holes in the bottom. Once the bag is in, place the capillary mat on top and pull the straps through the holes, so they go down into the water container. Use 1 long strap horizontally and pull it through two holes, use the shorter strap and pull through two holes below the logo.

**Plant instructions**

Place a plant directly in the top box on the capillary mat. For plants that prefer less moist environments, place a layer of sand or small stones on top of the capillary mat. The first time you use a planter, pour water directly on to the soil and fill up the water tank. If the straps and water container dries out, water additionally onto the soil. Sometimes you might need to change the water if there is a lot of bacteria in the soil.

**There are available different language versions.**

Step 1:

Make sure that the bag and capillary mat are placed correctly as described to the left. The mat with straps should look like on the drawing above. Place the plant directly on top of the capillary mat and surround with soil.

Step 2:

Once planted, pour water on the soil so it can run down to the water tank through the capillary straps. Water generously from the top the first time, and each time the soil becomes dry.

Step 3:

Open the planter by slightly lifting the side with the Squarely logo and take it off.

Step 4:

Pull the plastic container few centimetres out, fill it up with 12l of water and reattach the side.

Step 5:

Refill the water tank 1-3 times a month. Make sure that the water container stays in the right place when watering, so you do not spill on the floor.

Step 6:

Make sure that the capillary straps are always wet. Through these straps, your plants absorb the water to fulfil their needs
