Installation Instructions for Pipeline 1 MIYO Hexagon LED Suspension with Power Lit Corners - Center Feed

P1SD_P-HX-C_ _

IMPORTANT INFORMATION

- This product is suitable for indoor locations.
- This instruction shows a typical installation.
- The luminaire either comes with a 4" flush canopy for fixtures up to 50W or with an 8" round surface mount canopy for greater than 50W.

SAVE THESE INSTRUCTIONS!

Section One: 4" Flush Canopy

NOTE: Before beginning any electrical work, ensure that power to the junction box is turned off.

NOTE: Omit this section if using the 8" Surface Mount Canopy. Refer to Section Two.

- 1: Connect the 120V white wire of the power supply to the 120VAC neutral wire with a wire nut.
- 2: Connect the 120V black wire of the power supply to the 120VAC line wire with a wire nut.
- 3: Place the power supply and wires inside the junction box.

- 4: Feed the low voltage wires from the power supply through the center hole of the mounting ring.
- 5: Mount the ring to the junction box holes with two #8-32 screws.
- 6: Make sure that the mounting ring is grounded in accordance with local electrical codes.

Section Two: 8" Surface Mount Canopy

- 1: Remove the three Phillips screws from the canopy to remove the mounting plate.

CEILING

2: Using the mounting plate as a template, mark three mounting holes onto the ceiling.

3: Tap the anchors onto the marked points up to the threaded portion with a hammer. Then screw in the threaded portion with a Phillips screw driver.

CEILING

ANCHOR →

JUNCTION BOX

CEILING

4: Make sure the mounting plate is grounded in accordance with local electrical codes.

5: Feed the 120VAC power wires through the center hole of the mounting plate.

6: Secure the mounting plate to the junction box and anchors using the provided screws and washers.

Section Three: Install the Fixture

1: Push each cable through the cord grips on the canopy.

2: Adjust the fixture height by pushing the cord grip to slide the fixture up and down. Release the cord grip to lock the cable in place.

3: Identify the power cable which is marked with 24VDC label. The other cables are for support only.

NOTE: If wire is curled or kinked, straighten by holding between the shaft of a screwdriver and thumb and pulling the wire through (see inset).

NOTE: Scan the QR Code to watch the video clip of the following steps or visit https://www.PureEdgeLighting.com/video_feed/installation_cxc_connector

- 4:** Use the 18AWG hole of the wire stripper to remove 1-3/8" of the outer insulation to expose the braided wire of the powered cable.
- 5:** Use the 18AWG hole of the wire stripper to remove 1" of the braided wire making sure not to nick the inner wire insulation of the powered cable.
- 6:** Use the 20AWG hole of the wire stripper to remove 1/8" of the inner insulated wire of the powered cable.

- 7:** Unscrew the coaxial connector covers and remove from the connector assembly.

- 8:** Using the provided 1.5mm Allen wrench, remove the M3 set screw from the coaxial connector assembly.
- 9:** Using the provided 2mm Allen wrench to loosen (do not remove) the M4 set screw.

- 10:** Slide the connector cover over the coaxial cable.
- 11:** Place the ferrule over the 3/8" braided wire of the coaxial cable.

12: Insert the coaxial cable into the coaxial connector until the wires of the center conductor are visible through the M3 set screw hole.

NOTE: Ensure that the split in the ferrule is aligned 90° from the M4 set screw (see inset).

13: Use the provided 1.5mm Allen wrench to replace and securely tighten the M3 set screw.

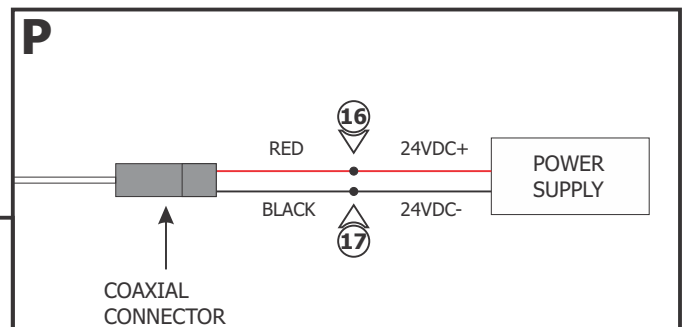

14: Use the provided 2mm Allen wrench to securely tighten the M4 set screw until it squeezes the wire ferrule tightly to the coaxial cable.

15: Replace the coaxial connector cover and tighten into place.

16: Connect the red coaxial connector wire to the +24VDC power supply wire with a wire nut.

17: Connect the black wire coaxial connector wire to the -24VDC power supply wire with a wire nut.

Q

18: Connect the 120VAC neutral wire to the 120V white wire of the power supply using a wire nut.

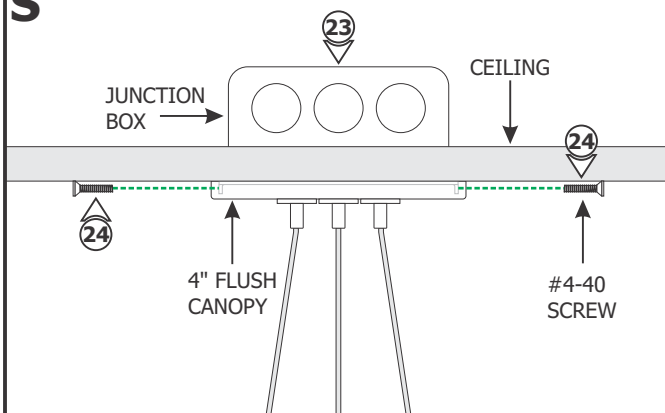

19: Connect the 120VAC line to the 120V black wire of the power supply using a wire nut.

For Models Configured with Fast Jack Port:

20: Connect each low voltage red wire from the power supply to each red wire of the Fast Jack connector using a wire nut.

21: Connect the neutral power wire from another 120VAC circuit to the 120V white wire of the power supply with a wire nut.

22: Connect the line wire from the same 120VAC circuit to the 120V black wire of the same power supply with a wire nut.

R**S**

For 4" Flush Canopy:

23: Place all wires and wire nut connections inside the junction box.

24: Align the canopy with the mounting ring and secure it with the two #4-40 screws using a 1/16" Allen wrench.

For 8" Surface Mount Canopy:

25: Place all wires and wire nut connections inside the canopy.

26: Align and secure the canopy to the mounting plate by tightening the three Phillips screws.
