## Installation Instructions for Verge Ceiling 24VDC

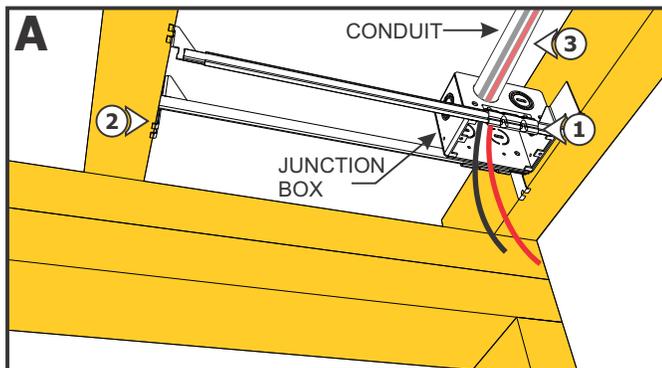

### IMPORTANT INFORMATION

- This product is ceiling mount only.
- This instruction shows a typical installation.
- This product is ETL listed for indoor use.

**SAVE THESE INSTRUCTIONS!**

### Section One: Install the Junction Box and Channel

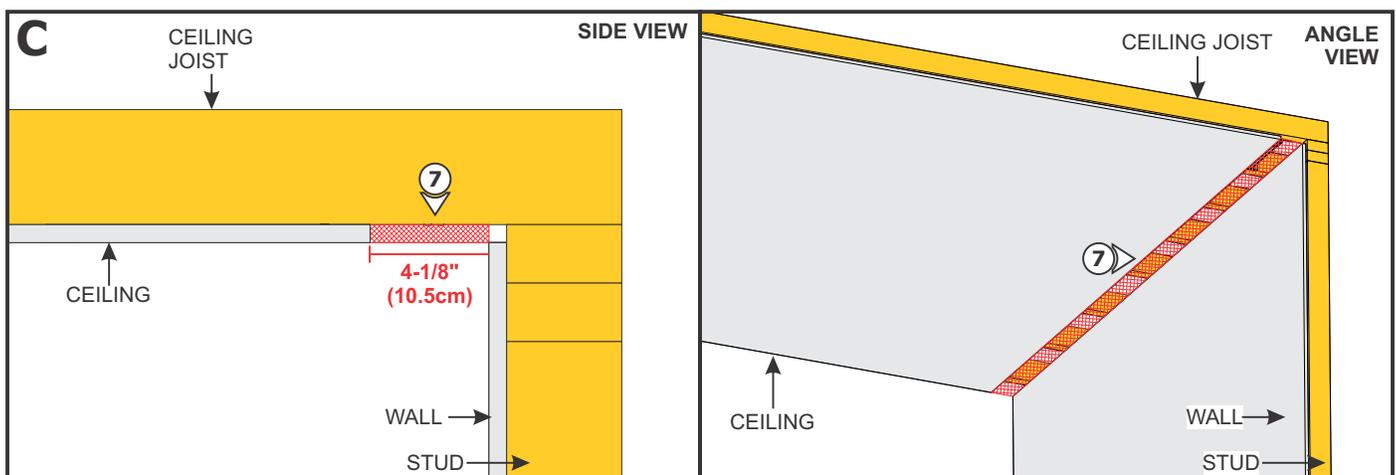

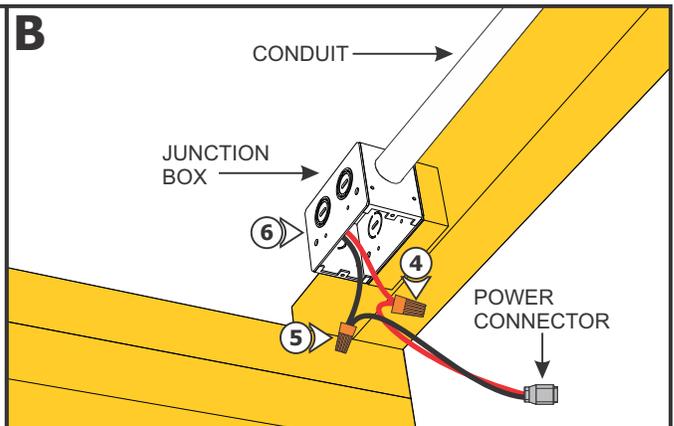

**NOTE:** The adjustable mounting bars mount to studs that are spaced 13" to 24" apart.

- 1: Mount each adjustable mounting bar to one side of the junction box and secure them with the mounting brackets and two Phillips screws provided.
- 2: Place the lips on the adjustable mounting bars against the studs. Secure the adjustable bars to the studs with the eight #8 screws.
- 3: Install conduit(s) (if required by local electrical code) and run low-voltage power wires to the junction box.

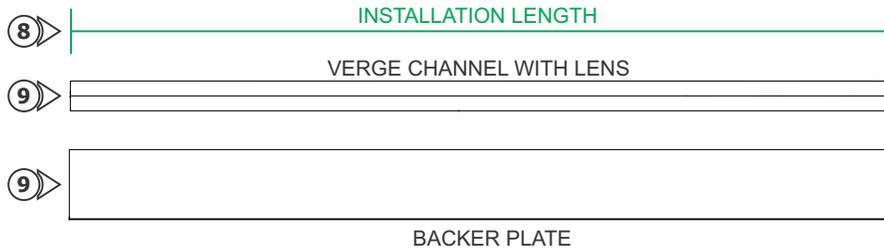

**ALTERNATE MOUNTING METHOD:** Secure the junction box using a cross brace support to the drywall or adjacent studs.

- 4: Connect the red +24VDC wire to the red power connector wire using a wire nut.
- 5: Connect the black -24VDC wire to the black power connector wire using a wire nut.
- 6: Place wire connections in the junction box.

**CAUTION:** Unroll the entire LED strip from the reel and use the power connector to power the strip making sure there is no outage before continuing with the installation. Afterwards, carefully roll the LED strip loosely back into the reel.

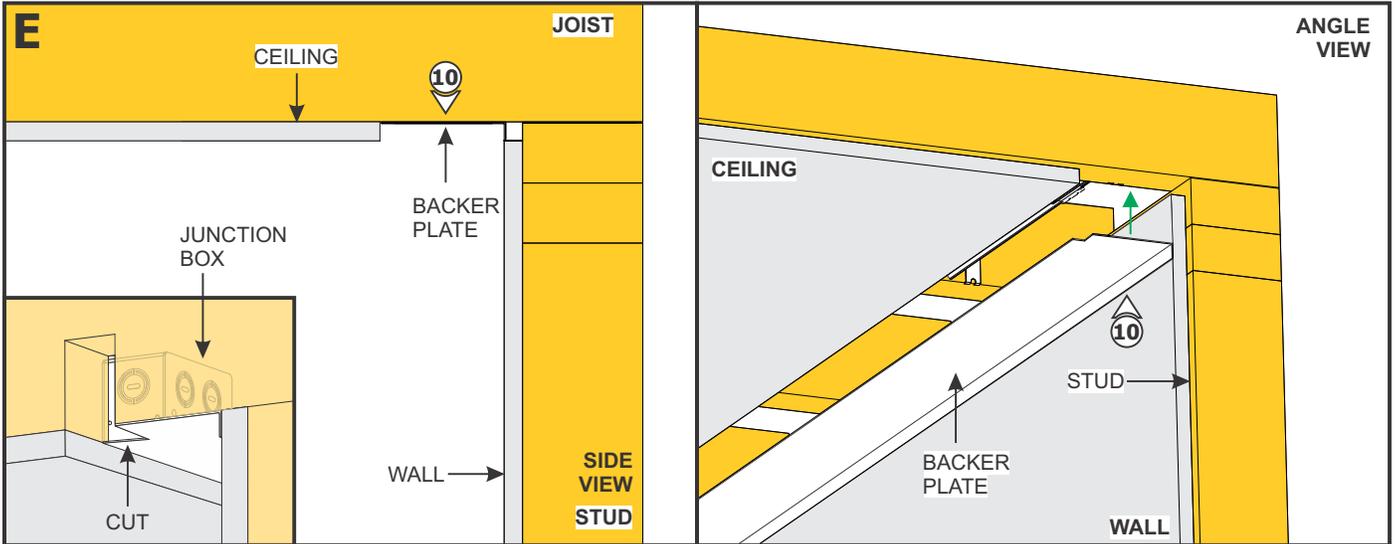

- 7: Using a jab saw or other appropriate tool, remove 4-1/8" (10.5cm) of the ceiling where the fixture will be installed.

**D**

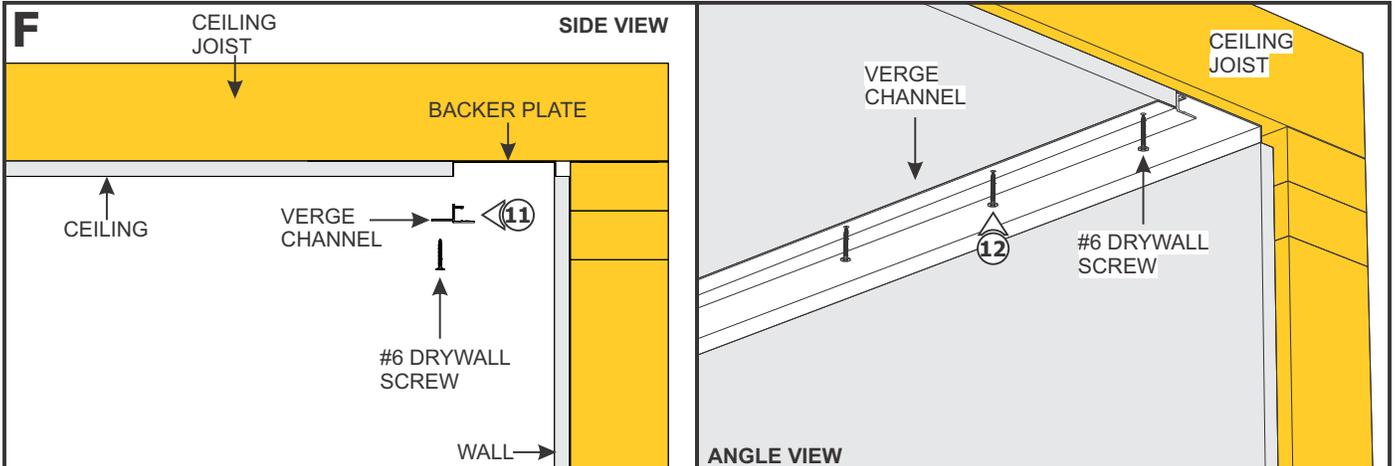

**8:** Measure the installation length.

**9:** Cut the backer plate, Verge channel, and lens to length to match the installation area.

**E**

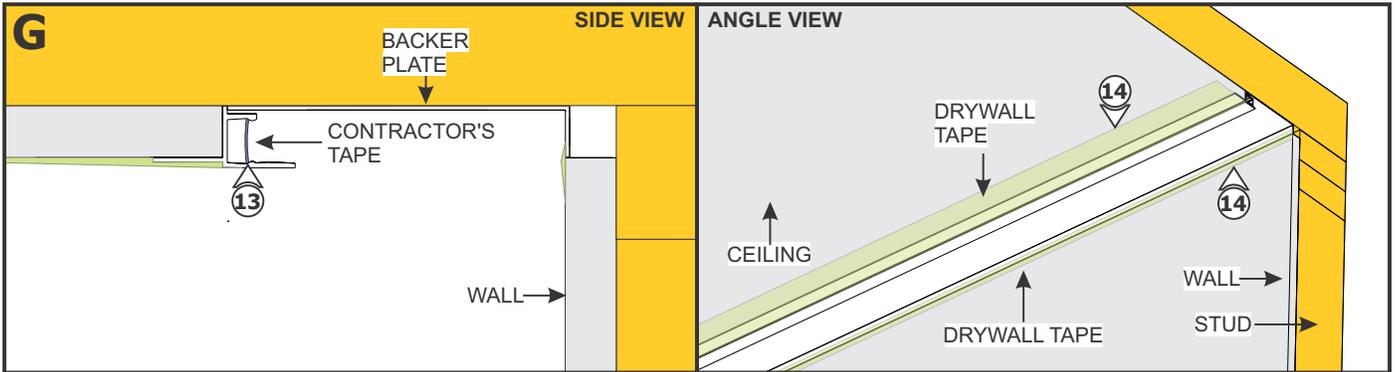

**!CAUTION!** It may be necessary to remove material from ceiling joists, backer plate, Verge channel, or lens to route power to the installation. Consult installation design when considering routing power (see inset.)

**10:** Attach the backer plate to the ceiling joists using construction adhesive. Ensure that the short bent edge of the backer plate is aligned with the wall.

**F**

**11:** Align the Verge channel with the installed backer plate.

**12:** Drill and countersink the channel. Attach the channel to the ceiling joists using #6 drywall screws.

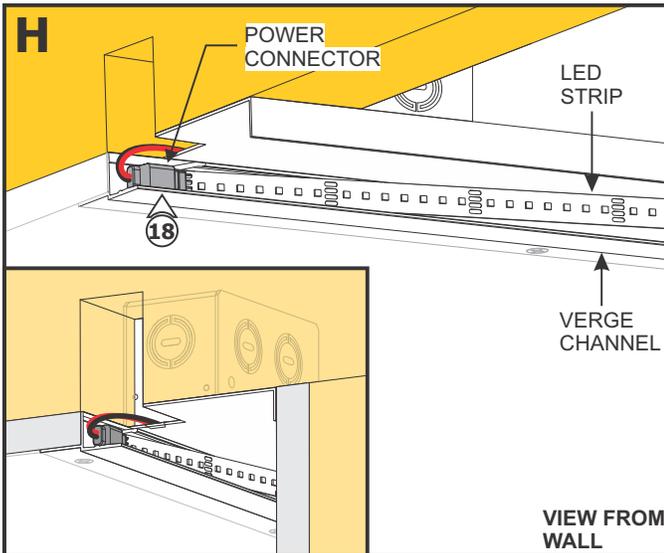

**NOTE:** For areas with lots of vibration, it is suggested to use Durabond to avoid cracking of plaster.

**NOTE: Do Not use premixed joint compound "Soft Mud." No use compuesto para juntas premezclado "Soft Mud."**

**13:** Cover up the opening section of the Verge with blue contractor's tape to prevent plaster and dust entering inside the channel.

**14:** Must apply drywall tape (Ultra-Thin drywall tape suggested) along edges of channel to prevent cracking of plaster after installation. **DO NOT** overlap strips of drywall tape.

**15:** Plaster, sand, and paint the Verge channel and backer plate.

**!CAUTION!** It may be necessary to remove material from ceiling joists, backer plate, Verge channel, or lens to route power to the installation. Consult installation design when considering routing power (see inset.)

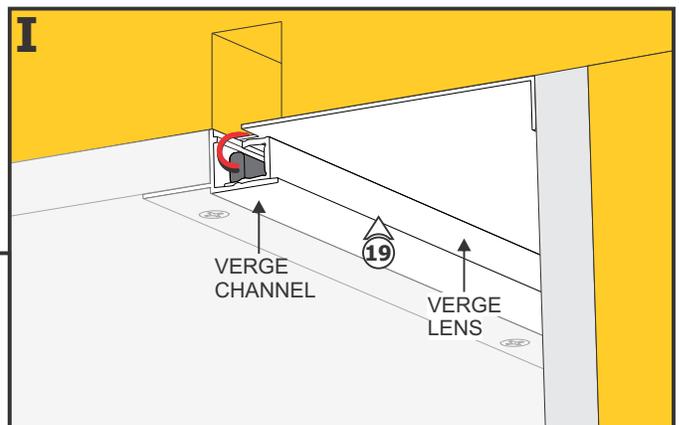

**16:** Clean the inner channel surface with alcohol to remove any dust or debris before continuing.

**17:** Carefully remove the backing from the LED soft strip, making sure not to remove the adhesive.

**18:** Align the red wire side of the power connector with the "+24VDC" marking on the soft strip. Push the male connector of the soft strip into the female power connector. Test the soft strip prior to installing in channel.

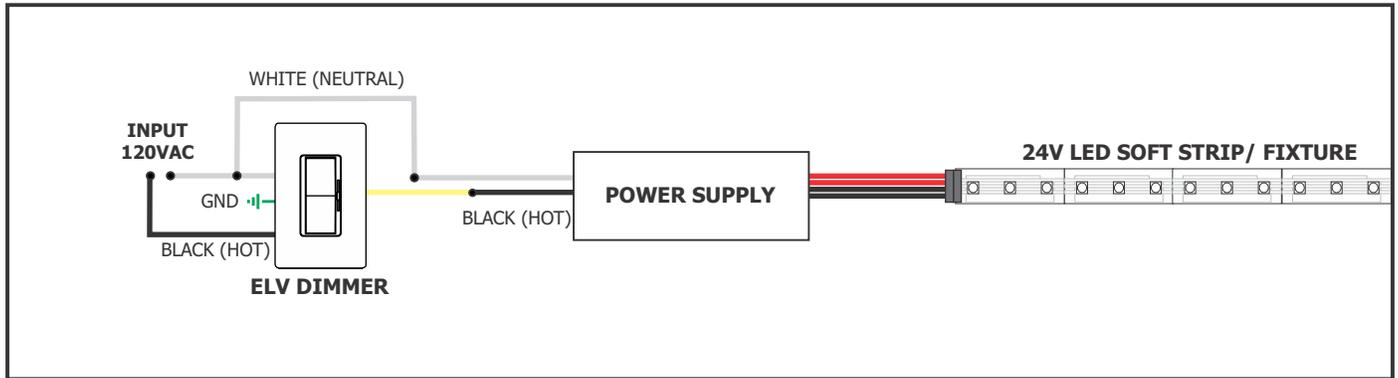

**NOTE:** If installation requires RGB, RGB+W, or Tunable White, refer to wiring diagrams on pages 4 through 6.

**19:** Snap the cut lens sections into the channel. Ensure all sections of channel are fully seated, especially where the lens sections meet in the corner of the installation.

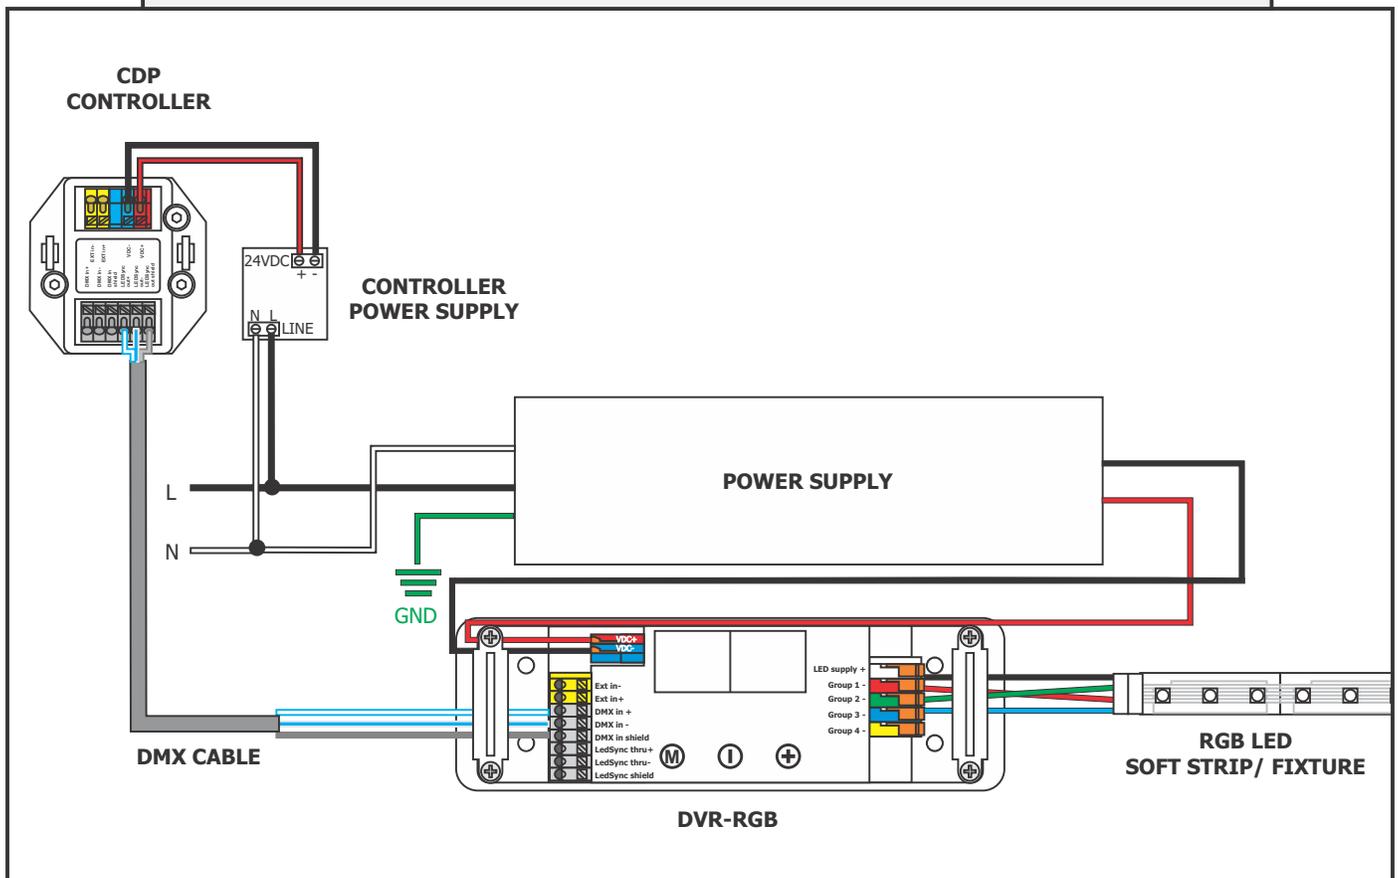

# Wiring Diagrams

## General 24VDC Configuration

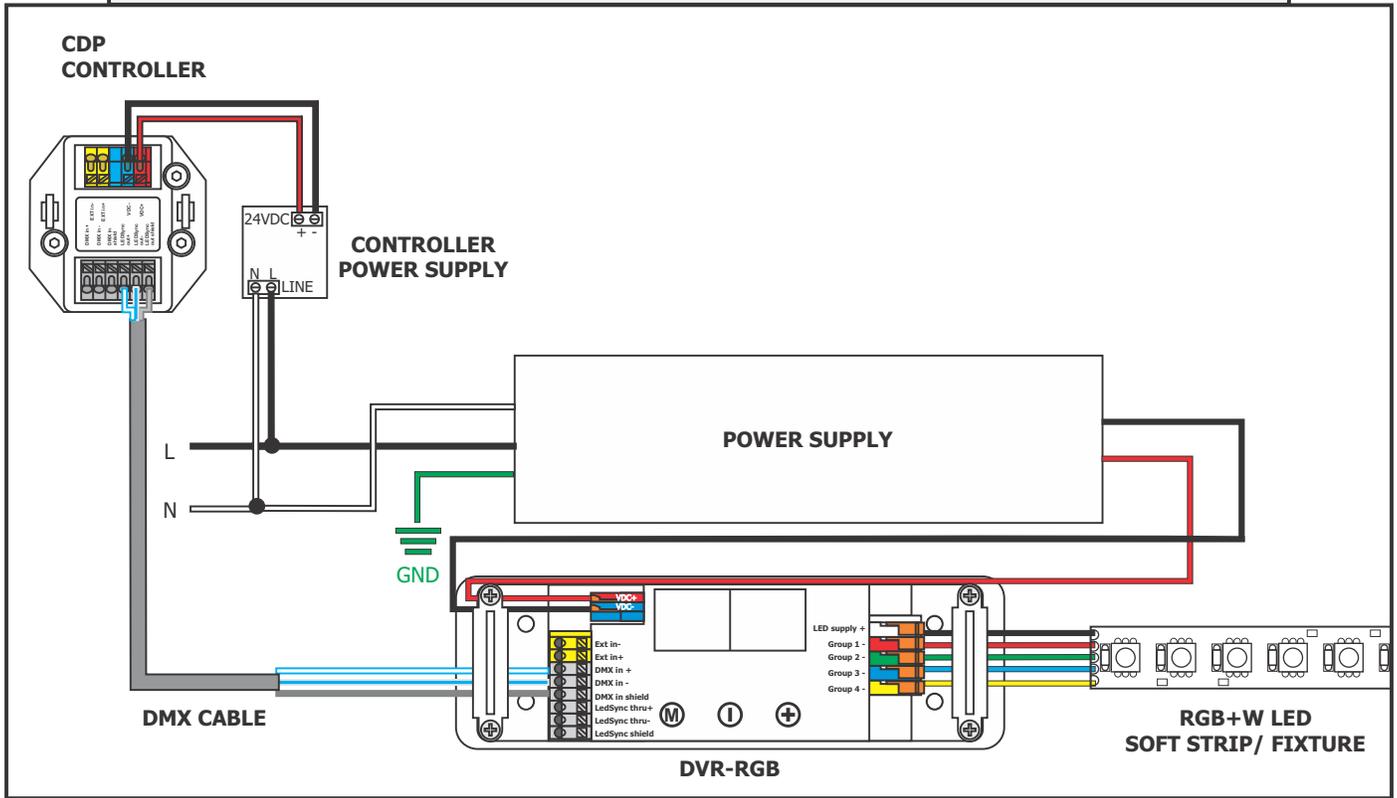

## Standard RGB Configuration

Using LED Power Supply with RGB Soft Strip & CDP, CTP or CDMX Control

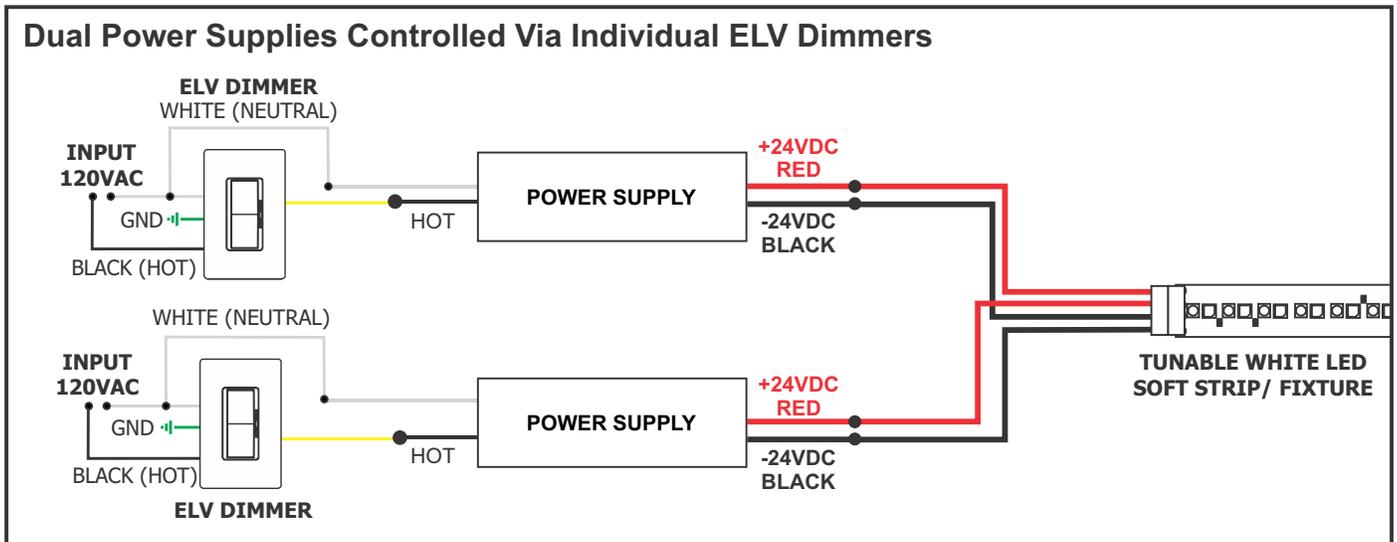

# RGB+W Configuration

Using LED Power Supply with RGB+W Soft Strip & CDP, CTP or CDMX Control

# Tunable White Configuration

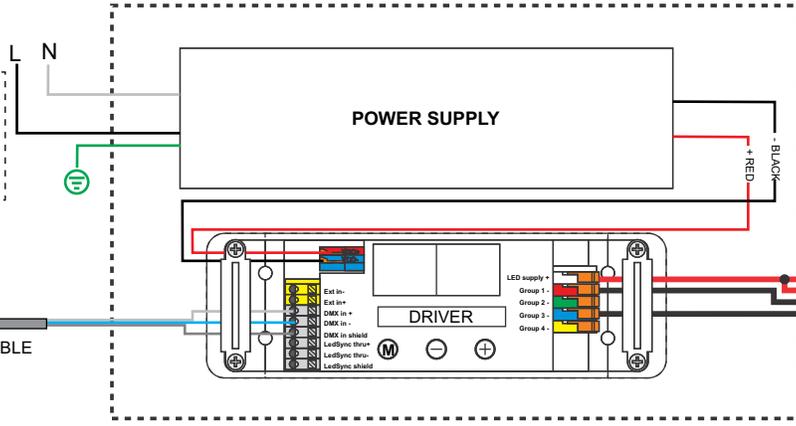

# Tunable White Configuration

## RGB Power Supply with DMX Driver

CDP/CTP or other  
DMX Signal From Any  
Compatible Controller

LED SYNC OUT -  
LED SYNC OUT SHIELD

DMX CABLE

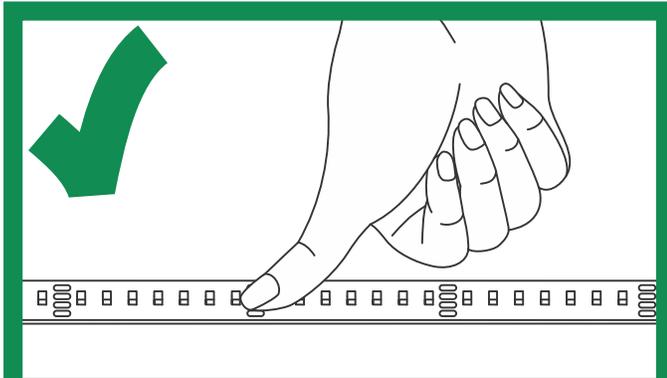

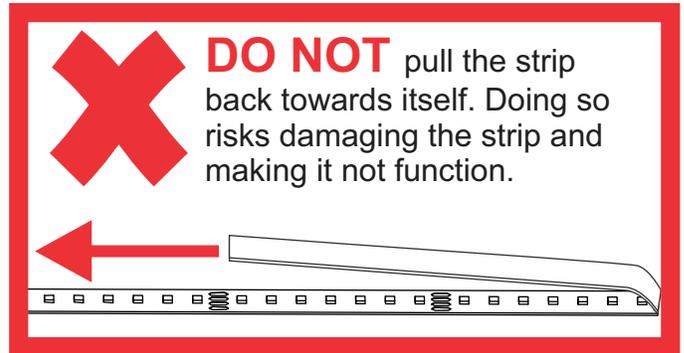

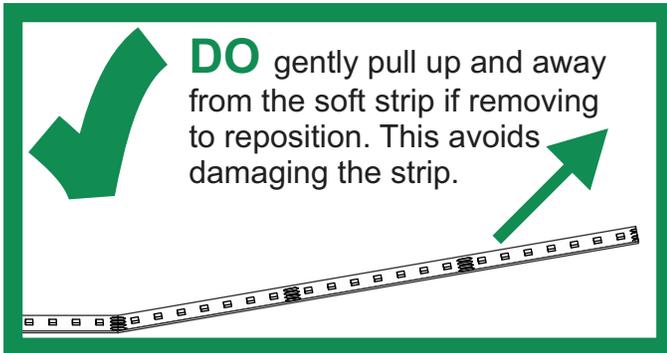

If using a CDP Color Dial, configure your CDP  
to Warm White mode using DIP switches and  
follow CDP operating instructions:

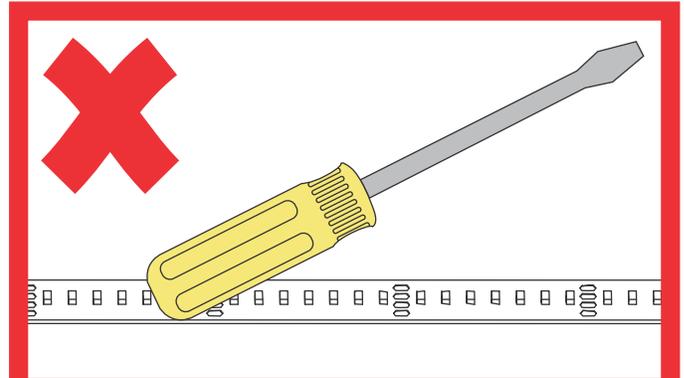

**TUNABLE WHITE LED  
SOFT STRIP/ FIXTURE**

## IMPORTANT INFORMATION REGARDING INSTALLATION AND REWORK OF SOFT STRIP LED

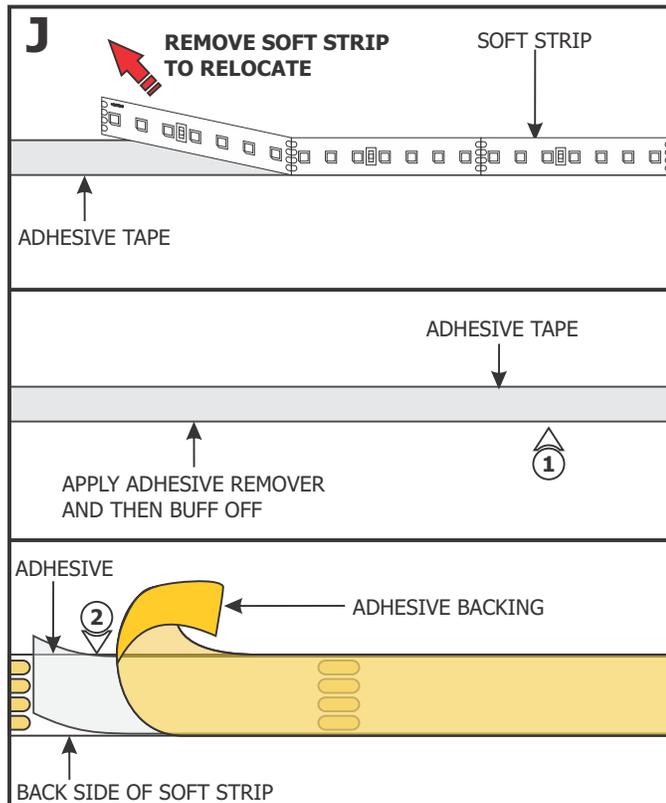

**DO** only ever use fingers to gently install soft strip to a surface **AFTER** cleaning the surface with alcohol.

**DO NOT** use any tool to install soft strip to a surface. This will damage the soft strip component.

### Relocating Soft Strip (Optional)

**NOTE:** If relocating the installed soft strip, make sure that the adhesive tape on back of the soft strip covers the entire strip. The adhesive tape isolates the strip from the installation surface. Damaged or inconsistent adhesive tape may cause the contacts on the back of the strip to come in contact with the conductive heat sink which will cause the strip to short and burn. Call Edge Lighting to get replacement adhesive tape and/or optional aluminum heat sink tape (SS-HR-F).

- 1:** To remove tape residue from back of the strip, apply WD-40, Goo Gone, or a mixture of warm water and lemon oil to the corner of a clean, dry towel. Gently buff the area containing the adhesive residue until it is completely removed.
- 2:** Gently remove a few inches from one side of the tape backing. Attach the adhesive tape to the back of the soft strip and apply moderate pressure to affix the tape. Continue this step a few inches at the time until the entire adhesive tape is attached to back of the soft strip.
- 3:** Refer to the steps 16 through 18 to reinstall the soft strip.
