Mesh Wireless Pendant

By Luceplan

Description

The Mesh Wireless Pendant is a lamp of great theatrical impact whose almost transparent structure, composed of a network of flexible cables with LED sources positioned at their intersections, conceals the complexity of the design. Black structure with White opaline lenses. The wireless version is equipped with an electronic board that allows users to interact with the lamp with the use of a smart device. Luceplan has developed a special app (for iOS and Android) making it possible to control single or multiple units (individually or as a group). The app can be programmed with 6 presets or custom set with a simple touch of the screen. Using a local internet connection, on/off functions can be programmed in remote access mode. Sold as a complete fixture.

Specifications
