Earth Stool
By Mater Design

## Description

The Earth Stool is the result of a new recycling technique that allows Mater Design to repurpose industrial waste into useful products. Plastic waste is combined with coffee bean shells left over from the roasting process and spent grains from the Carlsberg brewery to form the stool's seat. The tubular steel frame also consists of 20% upcycled steel. As sustainable as it is stylish, the Earth Stool features a streamlined design perfect for a modern interior.Note: The Beer Stool is only available in counter height, and the Dark Coffee Stool is only available in bar height.

Shown in gunmetal / dark coffee

## Specifications
