Chair One Set of 2

By Magis

Description

A die-cast aluminum shell made up of many small, perforated and triangular faces makes up the Chair One Set of 2. Chair One is built with a series of flat elements joined one to the other at angles to create a three-dimensional shape. All this is achieved by exploiting the potential of die-casting which is a precise technology allowing complex three-dimensional shapes to be obtained from metal (in this case aluminum). The result is therefore a chair in which the spaces prevail over the solid parts to characterize its aesthetic quality.
