Buster + Punch Toggle Retractive Switch Module

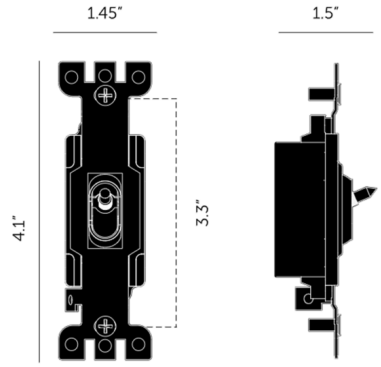

By Buster + Punch

Description

The Buster + Punch Retractive Toggle Switch Module is made to be used with the Buster + Punch Wall Plate and Detail Kits allowing you to create one of a kind switches for your home. The Retractive Switch Module features a sprung mechanism that returns to its original position. Can be paired with industry-standard smart control modules (with retractive switch inputs) to control various functions within your home. When used in a lighting circuit, a short press turns the light on/off. A long press cycles the brightness up and then down to reach the desired brightness level. Wired on the same circuit as a window blind, a short press opens/closes the blind completely, and a long press partially raises or lowers the blind until you release it. Note: This switch requires a multipoint dimmer module or a smart dimmer module that accepts a retractive input to function. Retractive switches are not compatible with 3-way or 4-way switching.Learn more about Buster + Punch Electricity Collection here.
