## Tierra Pendant By FARO Barcelona

### Description

The Tierra Pendant, designed by Hector Serrano, combines the beauty of nature with the innovation of 3D printing. The shade is made of PLA (a bioplastic of vegetable origin) mixed with recycled pine cellulose. This gives it a random and imperfect texture for an artisan look. The shapes in this collection evoke the warmth of beehives in a subtle and synthetic way. When lit, the designs transform into luminous sculptures thanks to their translucency. The light can be placed individually or combined with the other models in the collection to create compositions that fill the space with light and presence.

Shown in black / natural
