Mitos Modular Spot Light

By kdIn

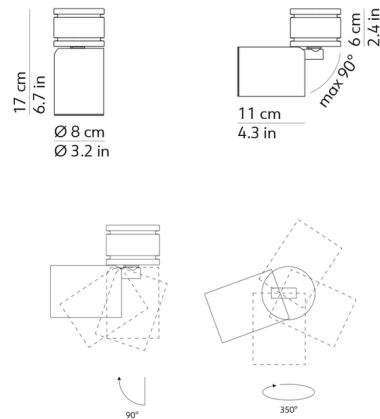

Description

The Mitos Modular Spot Light is part of a lighting system in which adjustable ceiling spotlights are linked by thin copper cables which deliver low voltage current. Up to 7 spotlights (with non-dimmable driver) or 5 spotlights (with dimmable driver) can be linked together. In addition to delivering power to the lights, the copper cables become part of the composition's design by tracing paths along the ceiling to guide the eye and add visual interest. The spotlights tilt 90 degrees and rotate 350 degrees to aim their light precisely where it is needed. Note: The Mitos Modular Spot Light system requires a Driver Canopy Kit and copper cables, sold separately.
