Cadmo Wall Sconce By Artemide

Description

The Cadmo Wall Sconce offers a striking architectural presence, providing dynamic indirect and diffused light that transforms any vertical surface. This elegant fixture features a tall, slender body meticulously crafted from injection-molded polycarbonate, available in a sophisticated Black or crisp White finish. The interior is thoughtfully finished in white paint to optimize light reflection. Designed to mount seamlessly to a standard electrical junction box, the Cadmo emits light both upwards and through its vertical aperture, creating a captivating play of light and shadow on the wall. This dual emission ensures both ambient illumination and a distinct visual statement. The sconce requires two 120-volt GU10 base LED bulbs (not included), giving you the flexibility to choose your desired light output. The Cadmo Wall Sconce is an ideal choice for adding modern elegance and compelling illumination to hallways, entryways, or feature walls in contemporary interiors.
